

3D Vision

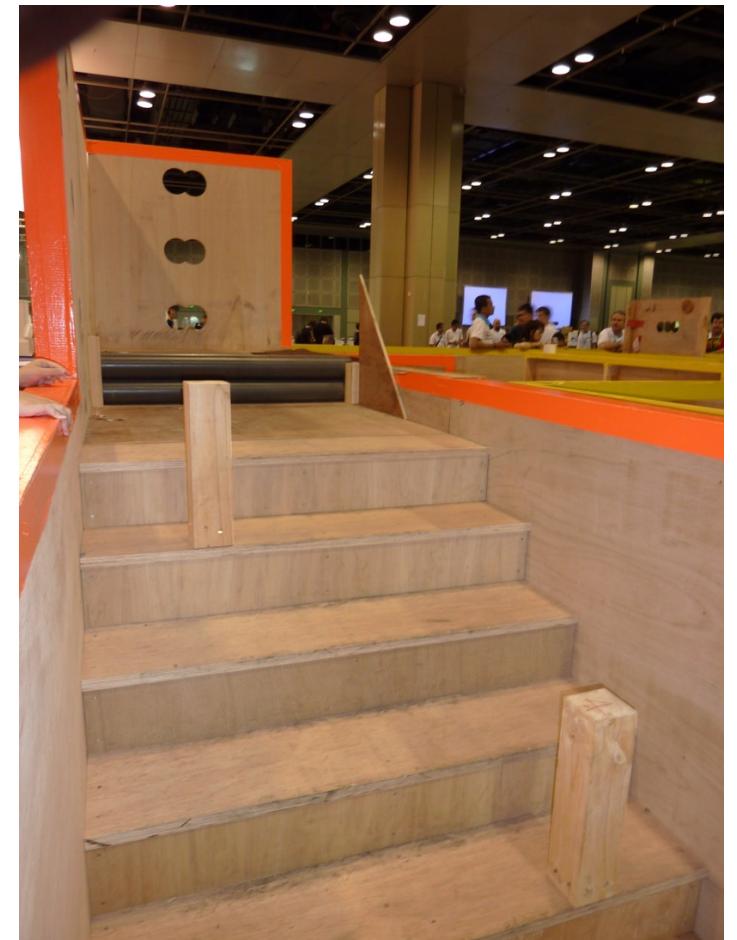

3D Cameras

- Stereo used to be the only option
- Now, RGB-D cameras are easier (at least for indoor)
- Stereo still use lower power

Urban Search and Rescue

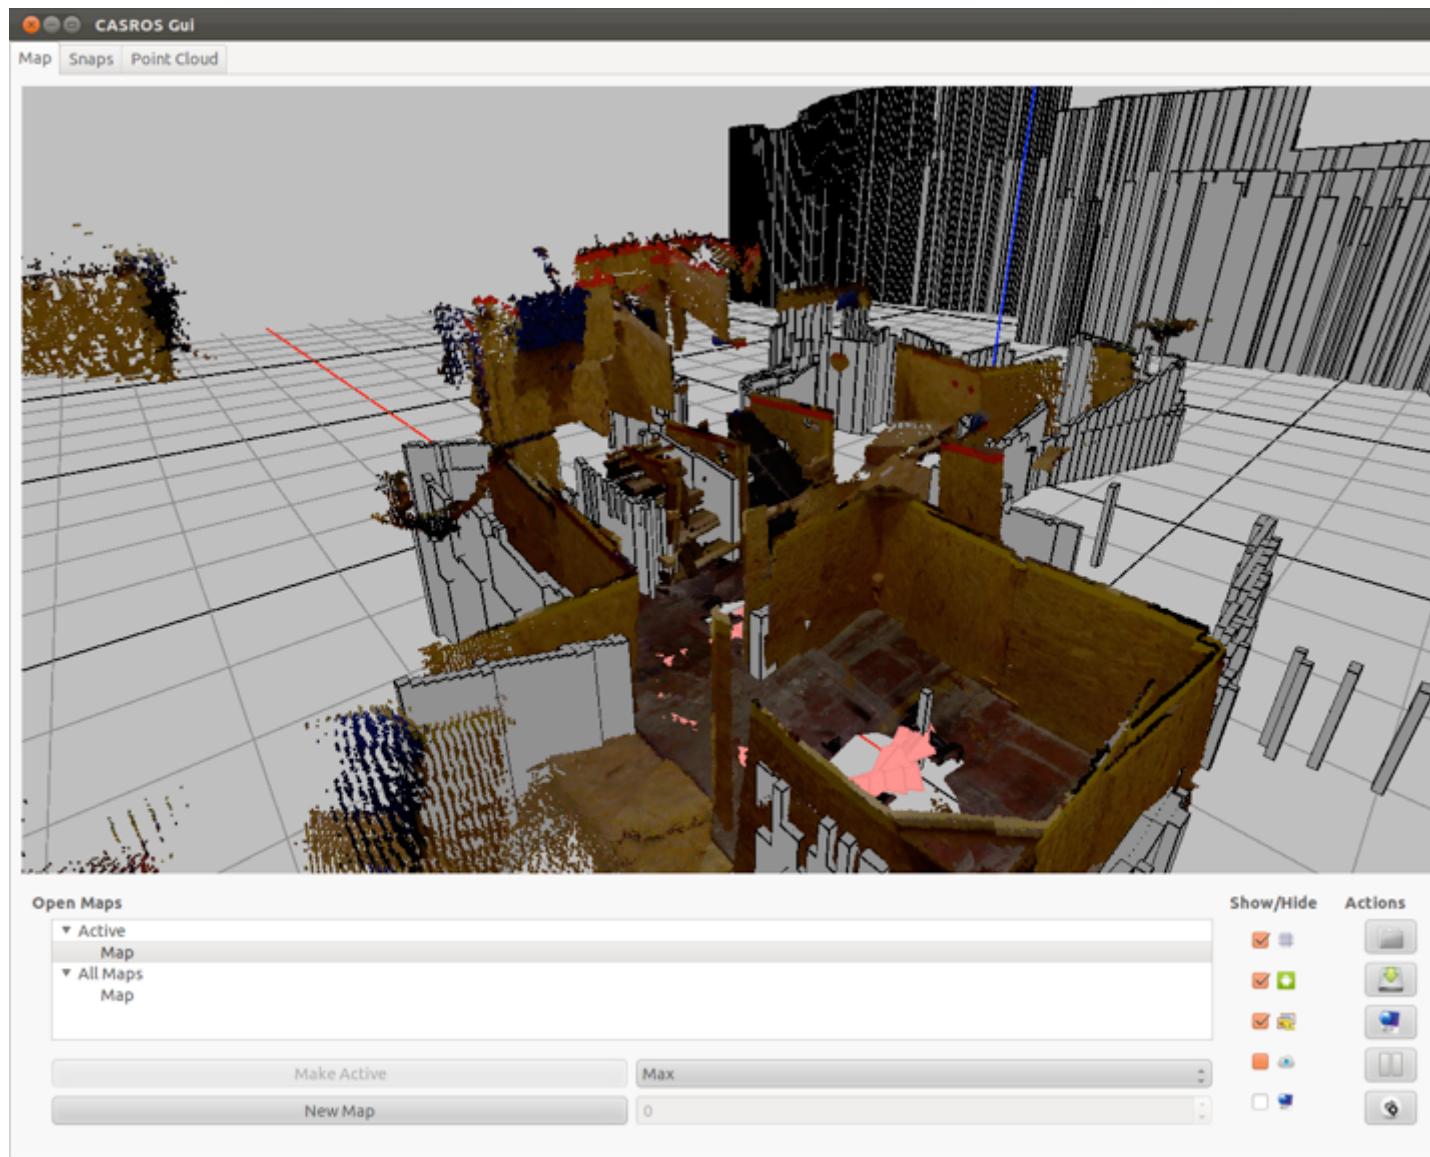

Rescue Arena

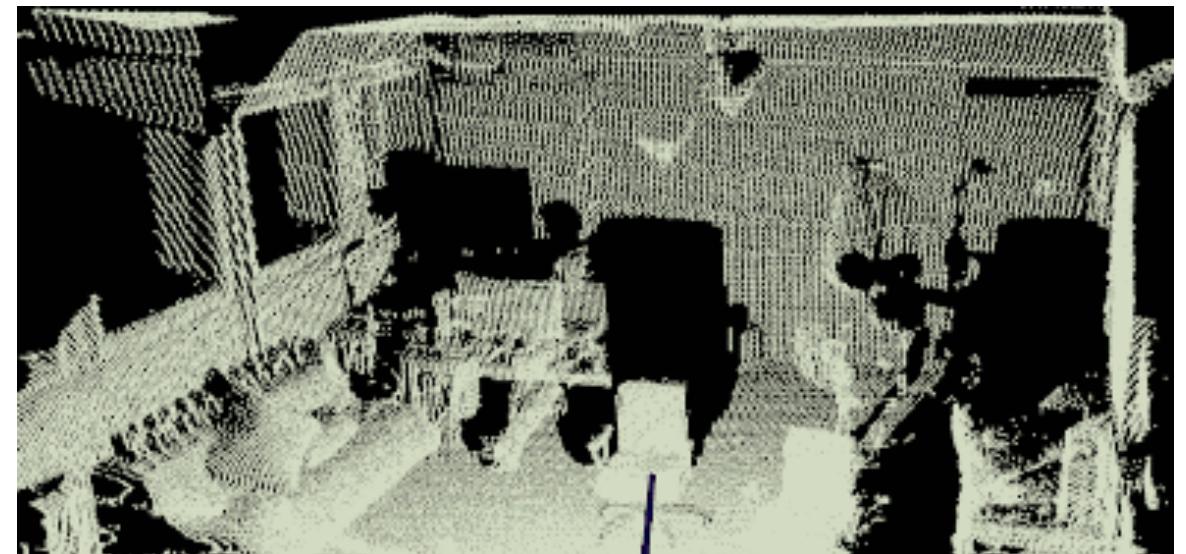

Rescue Arena

Explore, map and find victims

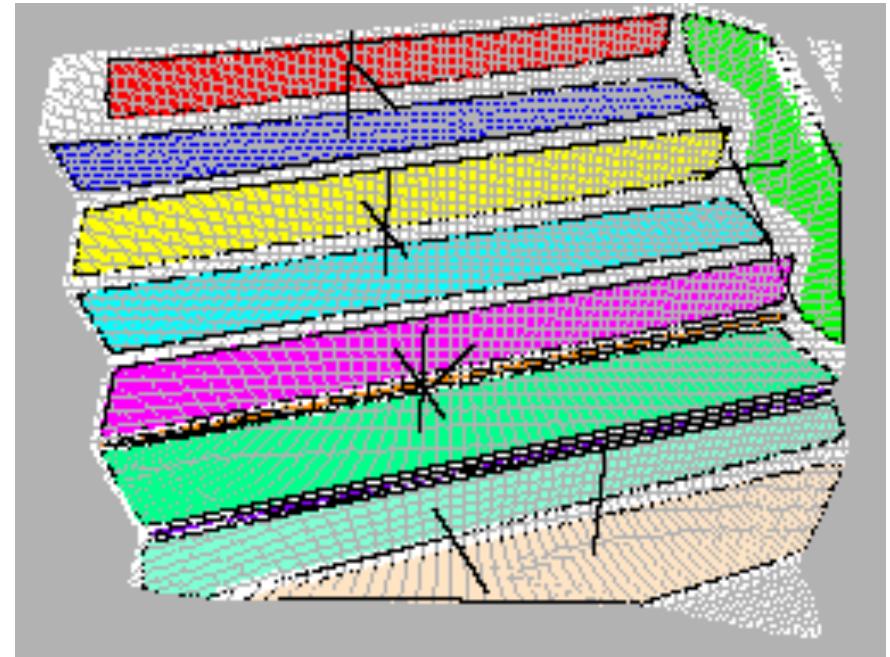

What does the world look like?

Segmentation

- Point cloud segmentation
- Using planes as primitives
- Represent each region's boundary by a convex hull
- Using plane's normal vector for orientation

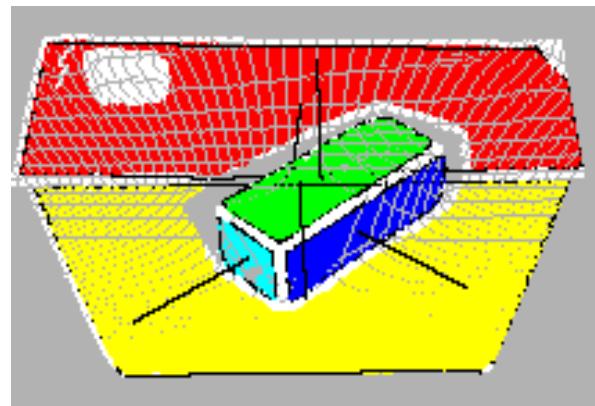

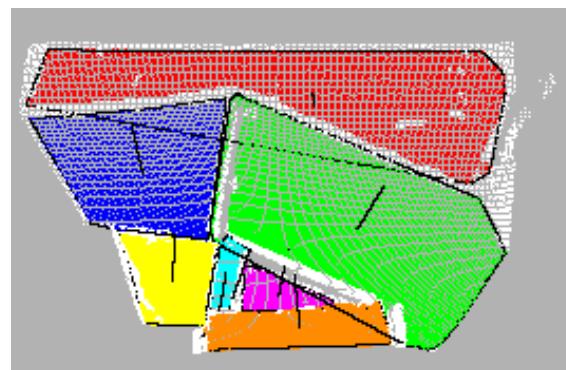

Normals Vectors

- Point P_1 has 8 neighbours in depth plane
- Form eight triangles:
 $P_1P_2P_3, P_1P_3P_4, \dots, P_1P_8P_9, P_1P_9P_2$
- Calculate normal vector from the cross product of P_1P_i and P_1P_j
- The normal vector for P_1 is average of eight normal vectors, and normalising the result

Segmentation

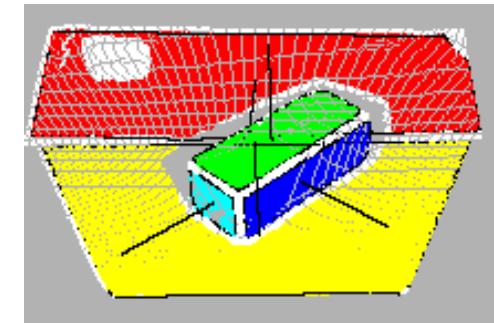

- Form regions by clustered neighbouring points that have (almost) the same normal vectors
- Find convex hull around points in the same region

Segmentation

Feature Extraction

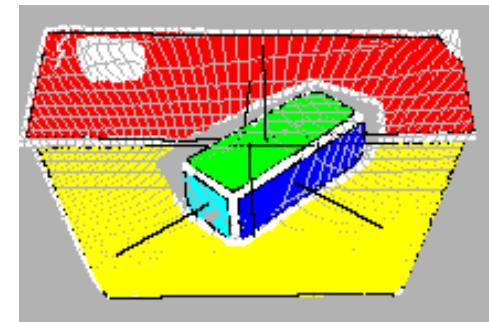

| | | | | | | | | | | | | | | |
|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|
| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 |
| 15 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 |

- Two sets of features
 - Properties of individual planes
 - Relationships between pairs of planes
- Represented as PROLOG predicates

Feature Extraction

staircase([pl2,pl4,pl5,pl7,pl8]).
staircase([pl4,pl5,pl7,pl8,pl10]).
staircase([pl1,pl2,pl4,pl5,pl7,pl8]).
staircase([pl2,pl4,pl5,pl7,pl8,pl10]).
staircase([pl1,pl2,pl4,pl5,pl7,pl8,pl10]).

Learning Object Classes

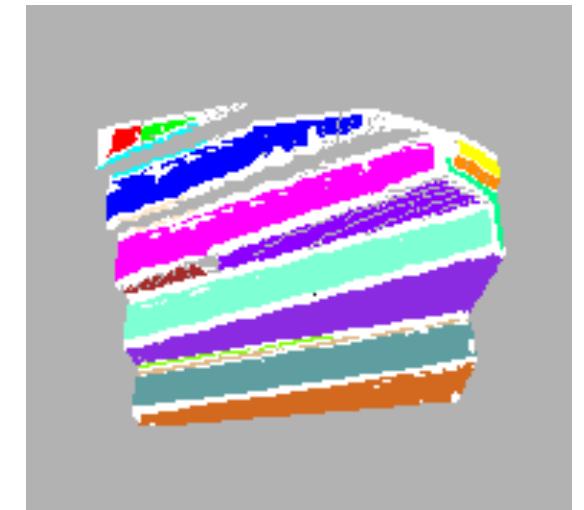

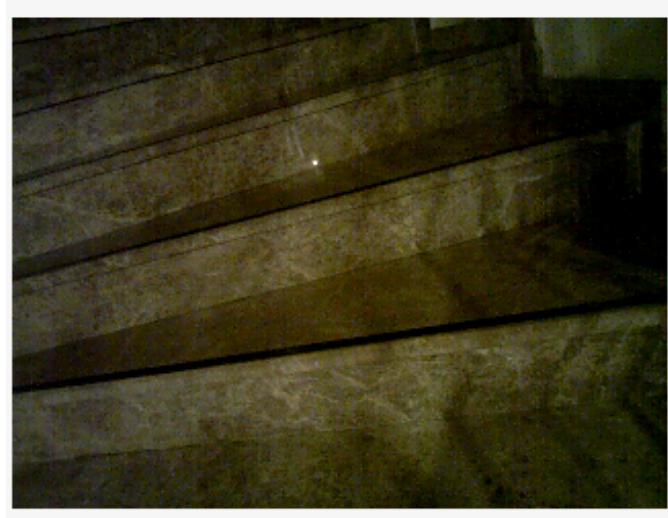

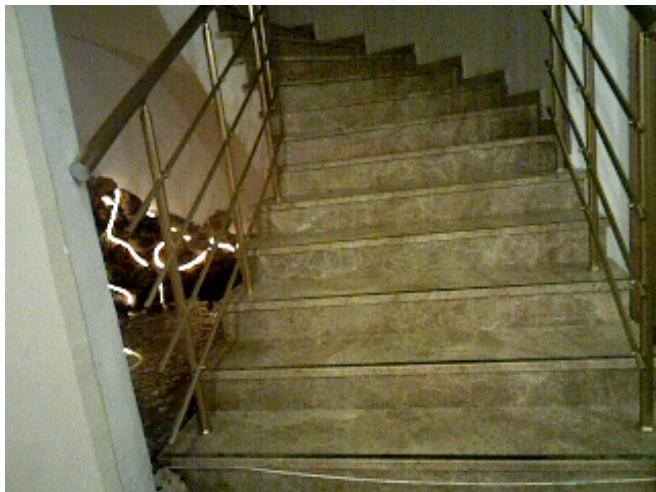

- Positive and negative example for each object class
- The result of labelling as PROLOG predicates
- Using relational learning system to construct a classifier for each type of object

Description of a Staircase

```
staircase(B) :-  
    p_a(B).  
staircase([X, Y, Z|B]) :-  
    p_a([X, Y, Z]),  
    staircase([Z|B]).
```

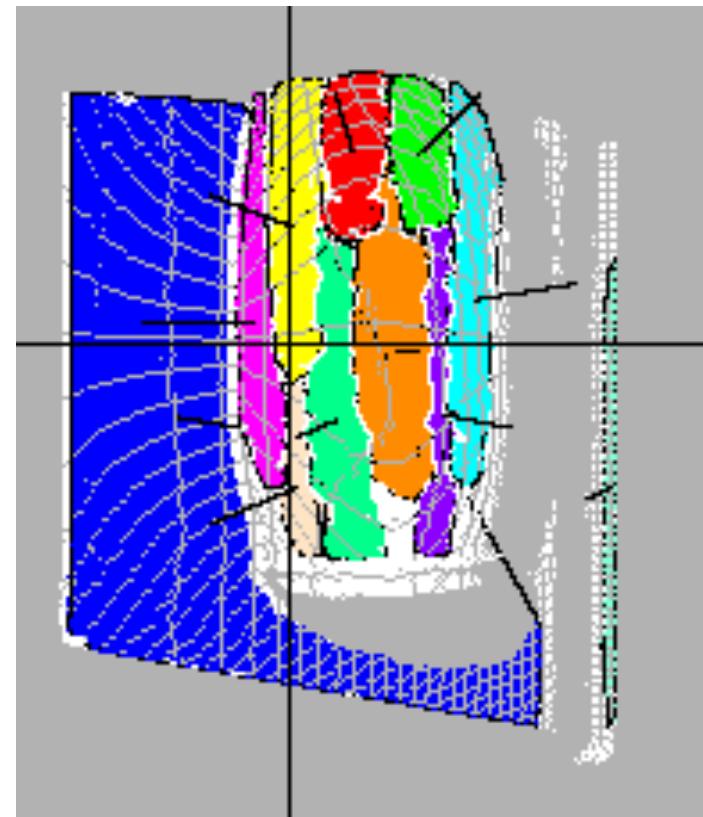

```
p_a(B) :-  
    member(X, B),  
    member(Y, B),  
    angle(X, Y, '90±15'),  
    member(Z, B),  
    angle(X, Z, '0±15')
```

New data, New camera

- Spiral stairs
- 950 more positive examples
- accuracy: 99% (sampled from one staircase over several floors)

Non-planar surfaces

Structural relationships
