

Tools of the Trade

Software Engineering @ Nine Publishing

Who am I?

George Wright

Technology Director - Metro Publishing

Nine Publishing

I am responsible for a delivery team that provides a core platform.

I apologise in advance

- Software architecture is evolving rapidly and is extremely diverse.
- There are no right answers!
- Technology is very cyclical in nature
 - thin client -> fat client -> thin client
 - Centralised -> decentralised
- One area that seems to have more accepted is that open standards has won.

Software Development

The CRAFT of software

- part engineering - accuracy and efficiency
- part designing - elegance
- part project managing - accountable
- part poetry - expressive
- part team sport - collaborative

Microservices are the new norm.

- Engineering for interoperability is key.
- No one technology is the silver bullet.
- Automated testing.
- Continuous Integration/Deployment.
- Serverless where possible. OUTDATED??
- No longer a monoculture approach. OUTDATED??
- Is event sourcing next?

the “Stack”

All of the systems and services that fulfil a request (end-to-end) - in this case a request from a web client.

The stack is the largest box you can draw around the things you can control/influence.

The “Corporate” stack

The “hipster” stack

MEAN stands for:

MongoDB is the leading NoSQL database, empowering businesses to be more agile and scalable.

Express is a minimal and flexible node.js web application framework, providing a robust set of features for building single and multi-page, and hybrid web applications.

AngularJS lets you extend HTML vocabulary for your application. The resulting environment is extraordinarily expressive, readable, and quick to develop.

Node.js is a platform built on Chrome's JavaScript runtime for easily building fast, scalable network applications.

Re-Platform

Language: GoLang

Release Pipeline: Concourse

Runtime environment: Docker/Kubernetes

Message Streaming: AWS Kinesis

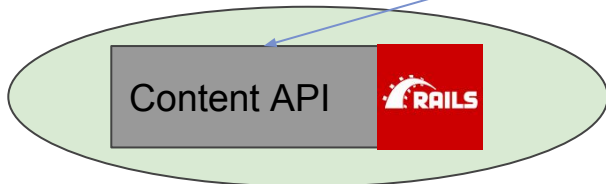

API Contract: GraphQL, gRPC

DOM rendering: React

Microservices

...

Amazon AWS

Rethinking the architecture at scale:

- Compute (EC2, Lambda) - processing
 - Elastic Load Balancer
 - Storage (S3/Glacier)
 - Database (DynamoDB/RDS/Redshift)
 - In Mem. Cache (Elasticache)
 - DNS (Amazon Route53)
 - Web Cache (CloudFront)
 - Queues (SQS)
 - Notification (SNS, SES)
 - Streaming (Kinesis)
 - Analytics (EMR)
 - Applications (ElasticBeanStalk)
- + Many, many more.

Alternatives

Application Hosting - Heroku, EngineYard, OpenShift, Google Cloud Platform, Microsoft Azure, Joyent + new entrants every day.

Check out DigitalOcean tutorials

The Browser “Basics”

- HTML5
- CSS3
- Javascript - JQuery(?), Modernizr
- Debugging - FireBug, Chrome Dev Tools
- JSON - CORS and JSONP
- REST

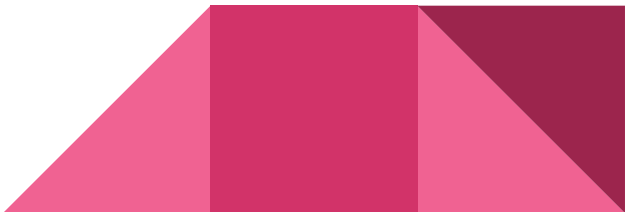

Frontend Stack provides:

- Package Management
- Templating
- Testing framework
- Common widgets
- Databinding
- Server communication

Developer stack

Every developer should have their own personal productivity stack including:

- Editor - Notepad++, Atom, Sublime, vim etc.
 - IDE - Visual Studio, JetBrains, Netbeans, Eclipse
 - Version Control - git, mercurial, bazaar, cvs, svn
 - Repository - gitorious, github, bitbucket, launchpad
 - Issue tracking - JIRA, Redmine, Bugzilla
 - Agile/SCRUM - Greenhopper, Trello
- 

Quality assurance stack

- Automated testing eg. Mocha, Jasmine, Selenium etc.
 - User acceptance testing tools
 - Production monitoring
 - Incident management
 - Disaster recovery plan
 - Peer reviewed documentation
 - Stakeholder management
 - Legal sign-off(?)
- 

Advice for new developers

- Code is disposable but features are not!
- Excellentia (scale) vs perfectio (absolute). Write “Excellent” code over “Perfect” code
- Practice Fermi Estimation techniques.
- Understand the difference between classical Criticism and criticism.
- Right tool for the right job.
- Participate.
- Stay up to date with the trends.

Thank you UNSW
