

**Requirements for Week 7 Prototype**  
**Deadline - Thursday Week 7 at 5pm**  
**SENG3011**

The second prototype deliverable consists of:

- an improved version of the previous prototype based on the feedback received from Week 5 version. As with any new release, the submission should include a brief summary description about what has been done in relation to the previous version and where the known bugs and limitations are (if any). This description will be posted as part of the release information on your Web site
- a simple client Web application. As a minimum, you should be able to specify parameters via a GUI and run your own API, and display the results.

All programs and information should be accessible from your Web page on Thursday Week 7 at 5pm.

As before, any team that completes the programs earlier can notify LIC so that testing can be conducted and early feedback given. Teams can then make new releases and have a chance to improve their programs before the deadline.
