

Web Technology Overview

with a focus on JavaScript-based technologies

Lawrence Yao
l.yao@unsw.edu.au

Who am I?

Lawrence Yao
UNSW casual staff
Developer Analyst at YTML Consulting

Email me if you need technical help or suggestions for your SENG project.

Slide 2

Continuing education

Employers will ask:

- What is exciting?

Your response:

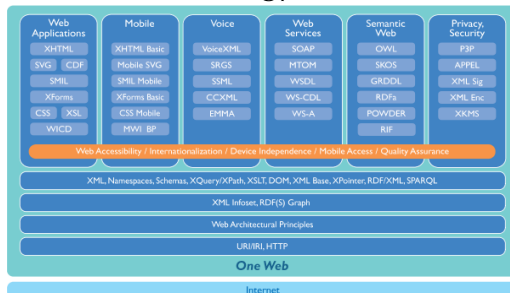

Slide 3

When learning coding,
be brave

Slide 4

Web Technology Architecture

From: <http://www.w3.org/Consortium/techstack-desc.html>

Slide 5

Web Browser Technology Architecture

From: <https://hsivonen.fi/web-stack/>

Slide 6

JavaScript

JavaScript: The Definitive Guide, 6th ed.
By: [David Flanagan](#)
Publisher: O'Reilly Media, Inc.
Pub. Date: May 3, 2011

- Highly recommended!!!
- Online access through UNSW library
- Learn all about the JavaScript programming language

Slide 7

JavaScript on client and server

Slide 8

Companion Web application

- **Mash:** The “supported” Web application
 - <https://github.com/mlawry/uns-w-cse-seng-mash-webapp>
 - Covers all technologies discussed
 - Study it in your own time
 - Ask me any questions about it via email

Slide 9

Server-side JavaScript

Slide 10

<http://nodejs.org/>

- This simple web server written in Node responds with “Hello World” for every request.

```
1 var http = require('http');
2 http.createServer(function(req, res) {
3   res.writeHead(200, {
4     'Content-Type': 'text/plain'
5   });
6   res.end('Hello World\n');
7 }).listen(1337, '127.0.0.1');
8 console.log('Server running at http://127.0.0.1:1337/');
```

Slide 11

Node.js

- How does it work? Read these tutorials
 - <http://www.nodebeginner.org/>
 - Highly recommended, but not entirely free
 - Provides enough knowledge to understand MASH
 - <http://code.tutsplus.com/tutorials/this-time-youll-learn-node-js-net-19448>
 - Outdated (v0.4.5)
- Official API
 - <http://nodejs.org/api/>

Slide 12

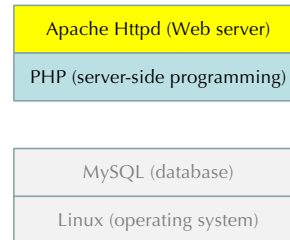

Classic LAMP stack

Slide 13

From LAMP to Node.js

Slide 14

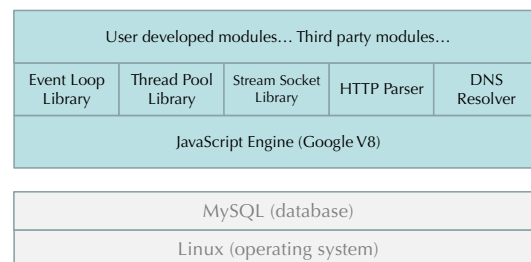

From LAMP to Node.js

Slide 15

Node.js architecture

Based on slides from:
<http://s3.amazonaws.com/four.livejournal/20091117/jsconf.pdf>

Slide 16

Client-side JavaScript

Slide 22

HTML DOM

- To see the Document Object Model (DOM)
 - Open Web browser
 - Go to any Web page
 - Press F12 on keyboard to bring up the “Web Developer Tools” (works on Windows)
 - Type JavaScript directly in the Console
- DOM can be changed without reloading entire Web page
 - Manually: Web Developer Tools
 - Programmatically: JavaScript

Slide 23

Cascading Style Sheets

HTML5 and CSS3
Elizabeth Castro and Bruce Hyslop
7th ed. Berkeley, Calif. : Peachpit, c2012
Checked out at Main Library Level 3 (006.74/5)

- HTML: content; CSS: formatting
- Colour, margin, position, animation, etc...
- Specified in-line or in a separate .css file
- CSS can be changed without reloading
 - Manually: Web Developer Tools
 - Programmatically: JavaScript

Slide 24

CSS selectors

```
1 <!DOCTYPE html>
2 <html>
3   <body>
4     <h1 class="special">A Special Class of Heading</h1>
5     <p id="para">A paragraph identified by the string 'para'.</p>
6     <h1 class="special">Another Special Heading</h1>
7     <p id="para2" class="special">ID has to be unique
8       within the DOM.</p>
9   </body>
```

Slide 25

CSS selectors

- Tag: Select all DOM elements with <Tag>
 - “p”, “h1”
- Tag#ID: Selects a unique <Tag> elem with the given ID
 - “p#para”, “p#para2”
- Tag.Class: Selects all <Tag> elems with the given Class
 - “h1.special”, “p.special”
- #ID: Selects a unique element (any tag) with the given ID
 - “#para”, “#para2”
- .Class: Selects all elements having the given Class
 - “.special”

Slide 26

CSS style sheet (.css)

```
body {
  line-height:1;
  text-align:left;
  margin-top:0
}

.yt-embed-thumbnail {
  width:100%;
  height:100%;
  cursor:pointer;
  background-size:cover;
  background-repeat:no-repeat;
  background-position:center
}

menu.small,ol,ul {
  list-style:none
}
```

Slide 27

JavaScript

- Guide: <https://developer.mozilla.org/en-US/docs/Web/JavaScript>
- W3C DOM specification: <http://www.w3.org/DOM/DOMTR>

```
1 <!DOCTYPE html>
2 <html>
3   <body>
4     <h1>A Heading 1</h1>
5     <p id="para">A paragraph of content</p>
6   </body>
7 </html>
```

```
1 var domElem = document.getElementById("para");
2 domElem.setAttribute('style', 'color: red');
```

Slide 28

Web browser

- Provides an environment to run JavaScript
 - The JavaScript code changes the DOM/CSS
 - DOM/CSS changes >> dynamic Web page
- Ties things together
 - Reads HTML and CSS, creates DOM, applies CSS, executes JavaScript, interprets result as the final Web page

Slide 29

Ajax

- Asynchronous JavaScript and XML
- Partially update a Web page in reaction to some event
 - No need to refresh entire Web page
 - Smoother user experience (less disruptive)
- Relies on Web browser functionality
 - Exposed as XMLHttpRequest (XHR) API
- Usually send/receive JSON in background
 - JSON data format: <http://json.org/>

Slide 30

Front-End Frameworks

- A compilation of complementary display elements that works like a theme
 - Focus on responsive design
- Bootstrap: <http://getbootstrap.com/>
 - A popular HTML, CSS, and JS framework for developing responsive, mobile first projects on the web
- Foundation: <http://foundation.zurb.com/>
- Demo Grid system: <http://getbootstrap.com/examples/grid/>

Slide 31

jQuery JavaScript library

- W3C DOM API is tedious and verbose
- jQuery is succinct and convenient
- Defines a global variable \$ (or *jQuery*)

```
1 <!DOCTYPE html>
2 <html>
3   <body>
```

```
1 var domElem = document.getElementById("para");
2 domElem.setAttribute('style', 'color: red');
```

```
1 $("#para").css("color", "red");
```

Slide 32

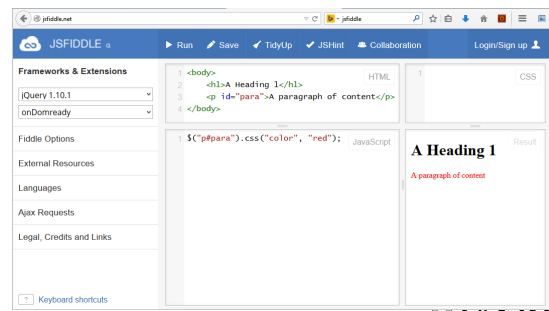

jQuery

- API Doc: <http://api.jquery.com/>
- Cook book: <http://stackoverflow.com/questions/tagged/jquery>
- Let's play
 - JSFiddle <http://jsfiddle.net/>
 - Don't forget to View Source on the Result frame

Slide 33

JSFiddle

Slide 34

SVG

- Scalable Vector Graphics (SVG)
 - Vector graphics in XML
 - Specification: <http://www.w3.org/TR/SVG/Overview.html>

```
1 <svg width="640" height="480">
2   <g id="layer1">
3     <rect
4       style="fill:#ff0000;stroke:#0000ff;stroke-width:12.5"
5       id="rect3774"
6       width="275.0"
7       height="120.0"
8       x="20"
9       y="20" />
10  </g>
11 </svg>
```

SVG in JSFiddle

```

1 <body>
2 <div id="rect" style="width: 640px; height: 480px;">
3 <svg width="640" height="480">
4 <g id="layer1">
5 <rect
6   id="rect3774"
7   width="275.0"
8   height="120.0"
9   x="20"
10  y="20" />
11 </g>
12 </svg>
13 </body>

```

```

1 rect#rect3774 {
2   fill: #ff0000;
3   stroke: #0000ff;
4   stroke-width: 10pt;
5 }
6

```

Slide 36

Web graphics

- Great graphics = HTML + CSS + SVG
 - View in any browser, always sharp, quick to load
 - But static!!
- Great visualisation needs interactivity
- Great visualisations = HTML + CSS + SVG + JavaScript (D3.js)

UNSW

Slide 37

Data-Driven Documents

- D3.js JavaScript library: <http://d3js.org/>

Data → JavaScript → Great Visualisation

+ HTML + CSS + SVG

Slide 38

D3.js

- How does D3 work? Find out here <https://github.com/mbostock/d3/wiki/Tutorials>
- In particular:
 - Three Little Circles <http://bost.ocks.org/mike/circles/>
 - D3 Tutorials – Scott Murray <http://alignedleft.com/tutorials/d3/>
 - Example gallery <https://github.com/mbostock/d3/wiki/Gallery>

UNSW

Slide 39

Web Browser Technology Architecture

From: <https://hsivonen.fi/web-stack/>

Slide 40

Putting Everything Together

- **Mash:** A “supported” Web application
 - <https://github.com/mlawry/uns-w-cse-seng-mash-webapp>
 - Study it in your own time
 - Ask me any questions about it via email
 - Bug fixes welcome (submit issues via GitHub)
- **Mash uses:**
 - Client-side: HTML + CSS + SVG + JavaScript + Ajax (D3.js, jQuery, Bootstrap)
 - Server-side: Node.js
 - Use it as a template for your project!

UNSW

Slide 41

Some hints on starting your project

Slide 42

Node.js tooling

- Node.js on (recent versions of) Linux
 - Install using system package manager
 - Debian/Ubuntu: nodejs, npm
 - Use command line and a text editor
 - Integrated Development Environments
 - Eclipse (search “eclipse node.js”)
 - NetBeans (search “netbeans node.js”)

Slide 43

Node.js tutorials (Linux)

- <http://www.nodeclipse.org/ubuntu/linux/java/nodejs/2015/2015/07/09/Starting-with-Java-and-Node.js-development-on-Ubuntu-Linux.html>
- Netbeans Nodejs Plugin:
<https://github.com/timboudreau/nb-nodejs>
- Command line:
<http://blog.modulus.io/absolute-beginners-guide-to-nodejs>

Slide 44

Node.js for Windows users

- Option 1: Switch to Linux?
- Option 2: Use Eclipse or NetBeans?
- Option 3: Use Node.js Tools for Visual Studio
 - Visual Studio 2013 Community Edition
 - Node.js Tools for Visual Studio
 - Node.js for Windows (MSI 64-bit)

Slide 45

Node.js tutorials (Windows)

- <https://channel9.msdn.com/Blogs/Seth-Juarez/Nodejs-Tools-for-Visual-Studio>
 - Includes a demo on deployment to Azure (if you want to use it)

Slide 46

Tutorial on Express framework

- Express via the command line
<https://codeforgeek.com/2014/10/express-complete-tutorial-part-1/>
- Deploy node.js apps to Heroku (free hosting service – conditions apply)
<https://devcenter.heroku.com/articles/getting-started-with-nodejs#introduction>

Slide 47

Some UI examples

- Examples:

- <http://www.nytimes.com/newsgraphics/2013/09/13/fashion-week-editors-picks/>
- <http://www.nytimes.com/interactive/2014/02/11/sports/sochi-2014-interactive-stories.html>
- <http://onedrive.live.com/>

Slide 48

Thank You

Questions?

Email me: l.yao@unsw.edu.au

Remember
When learning coding, be brave
